AMENDMENT AND REPLY

Hon. Commissioner of Patents
Washington, D.C. 20231

Sir:

This Reply is responsive to the Office Action dated April 10, 2002. Kindly enter the following amendment and remarks prior to further examination.

A substitute specification is provided herewith. The substitute specification has a wider top margin than the originally filed specification, and the data table in Example 2 of the substitute specification is re-formatted so that it does not extend into the right margin. The text of the substitute specification is the same as that of the originally filed specification.

IN THE SPECIFICATION:

The paragraph beginning on line 30 of page 4 (line 1 of page 5 of the substitute specification) is amended as follows:

-- Thus, mitochondrial peptides displayed at the cell surface can serve as histocompatibility antigens, seeing as two separate systems have been identified in mice and rats, respectively. There is no reason to believe that similar systems would not be present in other mammals. Therefore, foreign mitochondria would be expected to result in the rejection of therapeutic tissue generated by nuclear transfer technology. Instead, using the methods of the present invention, the present inventors have surprisingly found in performing the
